Risk		Trisomy 21 Screening		
<p>Summary</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 337 women with the same data, there is one women with a trisomy 21 pregnancy and 336 women with no affected pregnancies.</p> <p>The hcg level is high.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 18		Neural Tube Defects (NTD) Screening		
The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk		The corrected MoM AFP (0.90) is located in the low risk area for neural tube defects.
