The calculated risk for Trisomy 21 is below the cut off which represents a low risk.
 After the result of the Trisomy 21 that its expected that among 5089 women with the same data,there is one women with a trisomy 21 pregnancy and 5088 women normal pregnancies.
 Prease note the risk calculations are statistical approaches and have no diagnostics value.
 If the number of data is big enough and the medians and the gestation age are covered,a false positive rate of 5.0 % is to be expected
