Date of Report
 22/11/2015

 PRISCA
 5.0.2.37

 Method
 BPD (<> Hadlock)

Patient Data		Risks at Term				
Name M	RS. HEMLATA SHARMA	Age Risk: 1:875				
Birthday	15/07/1985					
Age at delivery	30.8					
Patient ID	D 11511210008					
Correction factors						
Fetuses	1 IVF	unknown	Previous trisomy 21	unknown		
Weight in kg	60 Diabetes	unknown				
Smoker unkn	own Origin	Caucasian				
Pregnancy data		Parameter	Value	Corr. MoM (as per maternal weight)		
Sample Date	20/11/2015		42.69 IU/ml	1.38		
Gestational age at sample date		hCG	1629.46ng//ml	1.79		
		uE3	6.93nmol/ml	0.86		
		Inh-A	254.52 pg/ml	1.27		
Risk		Down's Syndrome Risk (Trisomy 21 Screening)				
1:100 1:1000 1:1000 1:10000 1:3 15 17 19 21 23 25 27 29 31 3 Trisomy 18		of the inform Please not tha Neural Tube I	ation provided by the t risk calculations are and have no diagnosti Defects (NTD) Scree	statistical approaches c value!		
The calculated risk for Trisor indicates a low risk	ny 18 is \$1:10000, which	risk area for n	eural tube defects.	is located in the low		
Risk A	Above Cut Off	Risk above Age	e Risk	Risk below Age risk
