### Immunocap Specific IgE

Conc. of IgE Antibody	Undetectable (<0.01)	Very Low (0.1-0.5)	Low (0.5-2.0)	Moderate (2.0-15)	High (15-50)	Very High (>50)
Clinical relation	Unlikely	Uncommon	Low	Common	High	Very High

<b>Interpretation</b>	Screen is positive for common grass allergens. Based on serological tests the most probable allergen(s) are bermuda grass, perennial rye-grass, Bahia grass, Timothy grass and meadow grass.
-----------------------	--

<b>Final recommendation</b>	Follow-up test after four weeks of avoidance of specific allergen may show a decreasing titre confirming the presence of immunological reaction to the specific allergen. Clinical correlation to be made by the expert physician (Dermatologist, Pulmonologist).
