| Name   | Mrs. Usha     | Age 29 YRS              | Sex F                 |
| Ref By   | Star Hospital |                         |                       |
| DIAGNOSIS: Normal<br>METHODOLOGY: Fluorescence <i>in situ</i> Hybridization (FISH)<br>PROBE NAME: AneuVysion (Abbott Mol., Inc.) |               |                         |                       |
| FISH:  |               |                         |                       |
|  |               |                         |                       |

**Please Note:** Although the methodology used in this analysis and interpretation is highly accurate, it does not detect small rearrangements and very low-level mosaicism, which are detectable only by molecular methods. Failure to detect an alteration at any locus does not exclude the diagnosis of any of the disorders.
