Name Mr LOKESH

Age 32 years

Sex M

Ref By Kamal Hospital and Maternity
Centre

DIAGNOSIS: Normal Male Karyotype

KARYOTYPE: 46, XY

INTERPRETATION: Cytogenetic analysis of PHA stimulated Peripheral Blood lymphocytes revealed a Normal Male Karyotype with no structural and numerical chromosomal Abnormalities.

KARYOTYPE: 46, Normal Sex Chromosomes

Peripheral Blood Chromosomal Analysis:

Please Note: Although the methodology used in this analysis and interpretation is highly accurate, it does not detect small rearrangements and very low-level mosaicism, which are detectable only by molecular methods. Failure to detect an alteration at any locus does not exclude the diagnosis of any of the disorders.
