Printed on 16/05/2016

Name Mrs Monika

Age 25 Years

Sex F

Ref By Amar Hospital

DIAGNOSIS: Normal Female Karyotype

KARYOTYPE: 46, XX

INTERPRETATION: Cytogenetic analysis of PHA stimulated Peripheral Blood lymphocytes revealed a Normal Female Karyotype with no structural and numerical chromosomal Abnormalities.

KARYOTYPE: 46, Normal Sex Chromosomes

Peripheral Blood Chromosomal Analysis:

Please Note: Although the methodology used in this analysis and interpretation is highly accurate, it does not detect small rearrangements and very low-level mosaicism, which are detectable only by molecular methods. Failure to detect an alteration at any locus does not exclude the diagnosis of any of the disorders.

For test performed on specimens received or collected from non-MoIQ locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point generation of the said specimen by the sender. MoIQ will be responsible only for the analytical part of test carried out. All other responsibility will be of referring Laboratory.
