Since I signed this report while conducting the ultrasound on Mrs. Pooja, I have neither detected nor disclosed the sex of the fetus to anyone in any manner. This is an obstetric ultrasound mainly done for estimation of gestation age, amount of liquor, placenta position and fetal well-being of the fetus and not for the evaluation of congenital anomalies. Moreover, the detailed fetal anomalies may not always be visible and are extremely difficult to visualize due to constantly changing position of the fetus, abdominal wall thickness and overlapping of various fetal parts. Therefore, all fetal anomalies may not necessarily be detected at every examination.
