REFERRED BY	DR SMITA VATS	TEST DONE	USC

OBSTETRICS ULTRASOUND (LEVEL-I)

LMP: 13.04.2018, GA LMP: 12weeks 4days

Uterus appears bulky and shows a single intrauterine gestational sac.

Gestational sac reveals smooth well-defined rounded margins.

Fetus is visualized with CRL of 67.3 mm corresponding 13 weeks 0 day.

Nuchal translucency is 1.3 mm.

Nasal bone is 2.4 mm.

Fetal movements are well visualized. No obvious congenital anomaly seen for this age.

Ductus venosus shows normal forward spectral trace.

Foetal cardiac pulsations are well appreciated. Foetal cardiac pulse rate is 144 bpm.

Placenta is posterior, reaching up to the internal Os.

No adenexal mass is seen on either side.

No free fluid is seen in the cul-de-sac.

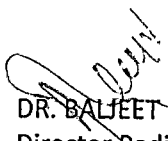

Cervical length 3.3 cm, Os is closed.

EDD (By USG): 15.01.2019

IMPRESSION: - SINGLE, LIVE, INTRA-UTERINE PREGNANCY OF ABOUT 13 WEEKS 0 DAY DURATION.

Declaration

I have neither detected nor disclosed the sex of her foetus to anybody in any manner.
