### Interpretation\* (based on partial information supplied)

#### DOWN SYNDROME

#### Screen Negative

This patient's relative risk for Down syndrome has been determined by dividing the assay results by the average analyte level in twin pregnancies, and then calculating the risk associated with a singleton pregnancy. This relative risk calculation places the patient below the screening cut-off for Down syndrome.

#### TRISOMY 18/13

#### Screen Negative

Accuracy of gestational age is essential for valid interpretation.
