## SURGICAL PATHOLOGY REPORT

### Palatal Swelling

#### DIAGNOSIS

### FIBROEPITHELIAL POLYP

#### SPECIMEN

Palatal Swelling

#### GROSSING

Received one bit of tissue, creamish brown in color, firm in consistency, regular margins and shape. Size: 0.7 x 0.8 cm.

#### Microscopy

**Scanner view** reveals one bit of tissue with epithelium and connective tissue stroma.

**Low Power View** reveals hyperplastic squamous lining epithelium with long and slender rete pegs overlying the connective tissue stroma.

Stroma shows dense bundles of collagen fibers with dense and diffuse inflammatory cells chiefly composed of lymphocytes and plasma cells. In few areas, bundles of collagen fibers shows hyalinization. Presence of endothelial lined blood capillaries of varying size and shape along with extravasated RBCs.

**High Power View** confirms the above mentioned findings.

**Note :** All biopsy specimen will be stored for 15 (fifteen) days, block and slides for 5 (five) years only from the time of receipt at the laboratory. No request, for any of the above, will be entertained after the due date.
