After the result of the Trisomy 21 test it is expected that among 3883 women with the same data, there is one woman with a trisomy 21 pregnancy and 3882 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value!		
			Trisomy 18 The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk Neural Tube Defect (NTD) Screening The corrected MoM for AFP (0.62) is located in the low risk area for neural tube defects.
