Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)		
Gestational age	20+0		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines. The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>		
Method	BPD (<>Hadlock)				
Risk			Trisomy 18		
			<p>The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk</p>		
			Neural Tube Defect (NTD) Screening		
			<p>The corrected MoM for AFP (1.44) is located in the low risk area for neural tube defects.</p>		

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
