After the result of the Trisomy 21 test (with NT) it is expected that among 1505 women with the same data, there is one woman with a trisomy 21 pregnancy and 1504 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approach and have no diagnostic values!

The patient combined risk presumes the NT measurement was done according to accepted guidelines
