Ultrasound Data		Down's Syndrome Risk (Trisomy 21 Screening)
Gestational age	16+0	**The calculated risk for Trisomy 21 is below the cut off which represents a low risk.**
Method	BPD (<>Hadlock)	After the result of the Trisomy 21 test it is expected that among 10000 women with the same data, there is one woman with a trisomy 21 pregnancy and 9999 women with not affected pregnancies.

The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

After the result of the Trisomy 21 test it is expected that among 10000 women with the same data, there is one woman with a trisomy 21 pregnancy and 9999 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value!

Risk

Trisomy 18

The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk

Neural Tube Defect (NTD) Screening

The corrected MoM for AFP (0.87) is located in the low risk area for neural tube defects.
The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
