Trisomy 18

have no diagnostic value!

The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk

the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and

Neural Tube Defect (NTD) Screening

The corrected MoM for AFP (1.32) is located in the low risk area for neural tube defects.

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
