| hCG                | 19879.5 | mIU/ml         | 0.97   | Trisomy 18   |   | <1:10000                 |  |
| Ultrasound Data    |         |                |        | Down's Syndre  | ome Risk (Trisomy 2   | 1 Screening)             |  |
| Gestational age    |         | 21+0           |        |  | The calculated risk for Trisomy 21 is below the cut off which indicates a low risk.  After the result of the Trisomy 21 test it is expected |                          |  |
| Method             |         | BPD(<>Hadlock) |        |  |   |                          |  |
|                    |         |                |        | that among 52  | 19 women with the sa  | me data, there is        |  |
| Risk               |         |                |        |  | th a trisomy 21 pregnancie  | -                        |  |
|                    |         |                |        | women with not affected pregnancies.  The calculated risk by PRISCA depends on the accuracy of |   |                          |  |
| Risk 1:10          |         |                |        |  |   | erring physician. Please |  |
|                    |         |                | /      |  |   | tistical aapproaches and |  |
|                    |         | /              |        | have no diagno   | ostic value!  |                          |  |
| 1: 00              |         |                |        |  |   |                          |  |
| 1:250              |         | / Q            | toff   | m !  |   |                          |  |
|                    |         | 1              |        | Trisomy 18   |   |                          |  |

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!

13 15 17 19 21 23 25 27 29 31 33 35 37 39 41 43 45 47 49

indicates a low risk

area for neural tube defects.

The calculated risk for Trisomy 18 is <1:10000, which

The corrected MoM for AFP (0.98) is located in the low risk

Neural Tube Defect (NTD) Screening
