Risks at sampling date		Down's Syndrome Risk (Trisomy 21 Screening)	
------------------------	--	---	--

The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.

After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!

Trisomy 13/18 + NT	
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.	The laboratory cannot be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic values
