

# HER2/neu IHC

PATIENT REPORT DATE BOOKING ID
Sheikh Abdul Majid 10 December 2019 #011912100059

# Human Epidermal Growth Factor Receptor 2 Immunohistochemistry

Clinician

**Human Epidermal Growth Factor Receptor 2** 

(HER2/neu): Negative (Score 0)

Clinician Name: Dr. Archit Pandit Medical Facility: Max Hospital Pathologist: Not Provided

## **Test Description**

Test is useful for determining overexpression of HER2 protein of gastric and esophageal adenocarcinoma in formalin-fixed, paraffinembedded tissue sections (with reflex to FISH testing).

#### **Clinical Information**

Human epidermal growth factor receptor 2 (*HER2*), is a protooncogene located on chromosome 17q21 that encodes a transmembrane protein with tyrosine kinase activity, a member of the HER receptor family and is involved in signal transduction pathways, leading to cell growth and differentiation. Amplification and overexpression of the *HER2* gene have been associated with a shorter disease-free survival and shorter overall survival in gastric and gastroesophageal junction cancers, as well as breast, endometrial, and ovarian cancer.

#### Specimen

Sample Type: FFPE block SB-4506-19 Site: Gastroesophageal Junction Pathology ID: MOLQ/IHC-58122019

Disease: Poorly Differentiated Adenocarcinoma

Scoring

The scoring system is based on type and origin of tumor.

Score	Staining Pattern	Interpretation
0	No reactivity or membranous reactivity in <10% of cancer cells	Negative
1+	Faint or barely perceptible membranous reactivity in ≥10% if cancer cells; cells are reactive only in part of their membrane.	Negative
2+	Weak to moderate complete, basolateral or lateral membranous reactivity in ≥10% of tumor cells	Equivocal
3+	Strong complete, basolateral or lateral membranous reactivity in >10% of cancer cells.	Positive

### Interpretation

Results are reported as positive (3+ HER2 protein expression), equivocal (2+), or negative (0 or 1+).

Equivocal (2+) cases will automatically reflex to FISH testing at an additional charge.

#### Methodology

Immunostaining for HER2 protein was done using PathnSitu Rabbit Anti-Human HER2 monoclonal (Clone EP3) antibody (#PR047)

## **Microscopy Evaluation**

**HE Staining (Figure 1)** 

Tumor cells: 15%

Her2/neu by IHC: Score 0

Percentage of cells with membrane staining: <10%

(Figure 2)
