Ultrasound Data		Down's Syndrome Risk (Trisomy 21 Screening)	
Gestational age	15+0	The calculated risk for Trisomy 21 is below the cut off which represents a low risk.	
Method	CRL (<>Robinson)	After the result of the Trisomy 21 test it is expected that among 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.	
CRL: 79.55 mm, NT 1.73		The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!	

The calculated risk for Trisomy 18 with NT is <1:10000, which indicates a low risk

Neural Tube Defect (NTD) Screening

The corrected MoM for AFP (1.33) is located in the low risk area for neural tube defects.

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
