Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)	
Gestational age	20+3		<b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b>	
Method	BPD (<>Hadlock)		After the result of the Trisomy 21 test it is expected that among 4669 women with the same data, there is one woman with a trisomy 21 pregnancy and 4668 women with not affected pregnancies. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.	
			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!	
Risk			Trisomy 18	
			<b>The calculated risk for Trisomy 18 is &lt;1:10000, which indicates a low risk</b>	
			Neural Tube Defect (NTD) Screening	
			<b>The corrected MoM for AFP (0.91) is located in the low risk area for neural tube defects.</b>
