			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!
Risk			Trisomy 18
			The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk
			Neural Tube Defect (NTD) Screening
			The corrected MoM for AFP (1.24) is located in the low risk area for neural tube defects.
