DIAGNOSIS: Normal Female Karyotype

KARYOTYPE: 46, XX

INTERPRETATION:

Normal female chromosome complement in limited number of metaphases analyzed. There is no evidence of aneuploidy or structural rearrangement at the resolution of banding analysis. A repeat specimen may be sent for testing if clinically indicated.

KARYOTYPE:

Peripheral Blood Chromosomal Analysis:

Please Note: Although the methodology used in this analysis and interpretation is highly accurate, it does not detect small rearrangements and very low-level mosaicism, which are detectable only by molecular methods. Failure to detect an alteration at any locus does not exclude the diagnosis of any of the disorders.
