1:100 1:250 Cut off 1:1000 1:10000 1:1			The calculated risk for Trisomy 21 (with NT) is below the cut off, which represents a low risk. After the result of the 1 risomy 21 test (with N1) it is expected that among more than 927 women with the same data, there is one woman with a trisomy 21 pregnancy and 926 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value! The laboratory cannot be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic		
<1:10000, which indicates a low risk			values
