Ultrasound Data		Down's Syndrome Risk (Trisomy 21 Screening)	
Gestational age	17+1	The calculated risk for Trisomy 21 is Above the cut off which represent an increased risk.	
Method	BPD(<>Hadlock)	After the result of the Trisomy 21 test it is expected that among 73 women with the same data, there is one woman with a trisomy 21 pregnancy and 72 women with not affected pregnancies.	

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!

Trisomy 18	
The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk	
Neural Tube Defect (NTD) Screening	
The corrected MoM for AFP (1.70) is located in the low risk area for neural tube defects.	

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!

Risk Above Cut Off
 Risk above Age Risk
 Risk below Age risk
