		Down's Syndrome Risk (Trisomy 21 Screening)			
The calculated risk for Trisomy 21 (with NT) is below the cut off, which represents a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 7586 women with the same data, there is one woman with a trisomy 21 pregnancy and 7585 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy the information provided by the referring physician. Pleas note that the risk calculations are statistical aapproaches an have no diagnostic value! The calculated risk for Trisomy 18/18 (with NT) is 1:10000, which indicates a low risk
