## CYTOGENETICS REPORT

## Test Name:Karyotype - Blood **RESULT:** Method: G-banding Metaphases counted: 20 Metaphases analyzed: 20 Metaphases karyotyped: 20 Banding Resolution: 400 46, XX Karyotype (ISCN 2016): Result: Normal

## **INTERPRETATION:**

Normal female chromosome complement. There is no evidence of an euploidy or structural rearrangement at the resolution of banding analysis.

**Disclaimer:** Although the methodology used in this analysis and interpretation is highly accurate, it does not detect small rearrangements and very low-level mosaicism, which are detectable only by molecular methods. Failure to detect an alteration at any locus does not exclude the diagnosis of any of the disorders.
