Ultrasound Data				Down's Syndrome Risk (Trisomy 21 Screening)			
Gestational age		20+2			l risk for Trisomy 21	is below the cut off	
Method	lethod BPD (<>Hadlock)			which represents a low risk. After the result of the Trisomy 21 test it is expected that			
				among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy and 9999 women			
Risk				with not affected pregnancies.			
Risk 1:10				The calculated risk by PRISCA depends on the accuracy of			
				the information provided by the referring physician. Please note that the risk calculations are statistical approaches and			
				have no diagnostic value!
