Ultrasound Data				Down's Syndro	ome Risk (Trisomy 2	21 Screening)	
Gestational age	18+6			The calculated risk for Trisomy 21 is below the cut off which represents a low risk.			
Method	BPD (<>Hadlock)			After the result of the Trisomy 21 test it is expected that			
				among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy and 9999 women			
Risk				with not affected pregnancies.			
Risk 1:10				The calculated risk by PRISCA depends on the accuracy of			
				the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and
