After the result of the Trisomy 21 with NT test it is expected that among 2390 women with the same data, there is one woman with a trisomy 21 pregnancy and 2389 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value! The laboratory cannot be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic values
