Ultrasound Data				Down's Syndrome Risk (Trisomy 21 Screening)			
Gestational age	14+1			The calculated risk for Trisomy 21 is below the cut off			
Method	CRL			which represents a low risk. After the result of the Trisomy 21 test it is expected that			
				0		th the same data, there is	
Risk				one woman with a trisomy 21 pregnancy and 9999 women with not affected pregnancies.			
Risk					The calculated risk by PRISCA depends on the accuracy of		
1:10				the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and			
				have no diagno		uisitear aapproaches and
