Risk	Down's Syndrome Risk (Trisomy 21 Screening)
 <p>The graph shows Risk (Y-axis) vs Age (X-axis). The Y-axis has markers at 1:10, 1:100, 1:250, 1:1000, and 1:10000. The X-axis has markers from 13 to 49. A red area above the cut-off line indicates 'Risk Above Cut Off'. A yellow area between the cut-off line and the age risk curve indicates 'Risk above Age Risk'. A green area below the age risk curve indicates 'Risk below Age risk'. A vertical bar is shown at age 37, indicating the patient's age risk.</p>	<p>The calculated risk for Trisomy 21 (with NT) is below the cut off, which represents a low risk.</p> <p>After the result of the Trisomy 21 with NT test it is expected that among 2463 women with the same data, there is one woman with a trisomy 21 pregnancy and 2462 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!</p>

Trisomy 13/18+NT
The calculated risk for Trisomy 13/18 (with NT) is <1:10000, which indicates a low risk

The laboratory cannot be held responsible for their impact on the risk assessment! Calculated risks have no diagnostic values

Risk Above Cut Off
 Risk above Age Risk
 Risk below Age risk
