Ultrasound Data				Down's Syndro	ome Risk (Trisomy 21	Screening)	
WOP 16+1 Method CRL Risk				The calculated risk for Trisomy 21 is below the cut off which indicates a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy and 9999 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that
