

PT. NAME: DEVENDRAPAL, AGE -46 YRS / M
REF BY: DR. SUNIL KHUSHWAHA

DATE: 13-Jun-23

U.S.G. WHOLE ABDOMEN

LIVER:- is mildly enlarged in size (16 cm in span) and reveals normal shape and echotexture. There is mild diffuse fatty infiltration. No evidence of focal SOL is noted. Intrahepatic biliary radicles are not dilated. Portal vein is normal in calibre.

GALL-BLADDER:- is well distended. Wall thickness is normal. A calculus of size 16 mm is seen in the gall bladder lumen. CBD is normal in course and calibre.

SPLEEN:- is normal in size & echotexture. No evidence of focal parenchymal lesion is seen.

PANCREAS:- is normal in size & echotexture. Main pancreatic duct is not dilated.

RIGHT KIDNEY:- is normal in size, shape, position & echogenicity. Cortico-medullary differentiation is well maintained. No evidence of calculus or hydronephrosis is noted.

LEFT KIDNEY:- is normal in size, shape, position & echogenicity. Cortico-medullary differentiation is well maintained. No evidence of calculus or hydronephrosis is noted.

URINARY BLADDER:- is well distended with normal wall thickness. No evidence of calculus is noted in the lumen.

PROSTATE:- Normal in size and echogenicity. No evidence of calcification / cyst formation is noted.

There is no evidence of ascites or enlarged paraaortic lymph nodes.

A defect measuring approximately 18 x 18 mm is noted in the anterior abdominal wall in umbilical region through which herniation of omental fat is noted.

IMPRESSION:- ULTRASOUND FINDINGS REVEAL

- > MILD HEPATOMEGALY WITH MILD FATTY LIVER
- > CHOLELITHIASIS
- > UMBILICAL HERNIA

KINDLY CORRELATE CLINICALLY.
