Ultrasound Data				Down's Syndrome Risk (Trisomy 21 Screening)			
Gestational age	21+0			The calculated risk for Trisomy 21 is below the cut off			
Method	LMP			which represents a low risk. After the result of the Trisomy 21 test it is expected that			
				among 393 wo	men with the same da	ata, there is one woman	
Risk				with a trisomy 21 pregnancy and 392 women with not affected pregnancies.			
Risk 1:10				The calculated risk by PRISCA depends on the accuracy of			
				the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and			
				have no diagnostic value!
