Risk Trisomy 18 The calculated risk by PRISCA depends on the accuracy the information provided by the referring physician. Pleas note that the risk calculations are statistical aapproaches a have no diagnostic value! The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk Neural Tube Defect (NTD) Screening The corrected MoM for AFP (1.02) is located in the lo risk area for neural tube defects.
