Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)		
Gesrational age	14+1		The calculated risk for Trisomy 21 is below the cut off which indicates a low risk.		
Method	CRL measurement		After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.		
Risk			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!		
			Trisomy 18		
			The calculated risk for Trisomy 18 (with NT) is <1:10000 which indicates a low risk		
			Neural Tube Defect (NTD) Screening		
			The corrected MoM for AFP (2.05) is located in the low risk area for neural tube defects.
