Patient Name	- MRS SHALA EVANJALINE	Age/Sex	- 22 Y/Female
Receipt No	- 24250001041	Receipt Date	- 16/04/2024
Mobile	- 9940985402	Department	- OBST. & GYNAECOLOGY
Address	- NSG	Consultant	- Dr AKANKSHA SRIVASTAVA (MBBS,MS)

H - 162 cm
W - 57 kg
DOB - 03/04/2002

USG NT SCAN/NB SCAN

LMP: 01-02-2024 EDD: 07-11-2024 POG: 12w4d

Anteverted gravid uterus shows a **single foetus**.
Foetal movements are normal.
Foetal cardiac activity appears normal (FHR 160bpm).
CRL - 66.8 mm corresponding to 13w0d.
Nuchal translucency is within normal limits (1.6 mm).
Nasal bone is visualized.
Ductus venosus reveals normal color flow and spectrum.
Placenta is anterior, grade 0.
Cervical length measures ~ 3.6 cm. Internal os is closed.
 Bilateral uterine arteries show normal color flow and spectrum.

IMPRESSION:

- Single live intrauterine pregnancy of 13 weeks 0 day gestational age

NOTE : All measurements including estimated foetal weight are subject to statistical variations. Not all congenital malformations of the fetus can be detected by ultrasonography and even detectable malformations may be missed due to technical limitations of US examination. Detection rates vary by the type of anomaly, women's BMI and position of the fetus.

I declare that while conducting ultrasonography, I have neither detected nor disclosed the sex of her foetus to anybody in any manner.
