Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)		
Gestational age	20+4		<p>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off which indicates a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 1611 women with the same data, there is one woman with a trisomy 21 pregnancy and 1610 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>The patient combined risk presumes that NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523; 1998). Please note that the risk calculations are statistical approaches and have no diagnostic value!</p>		
Method	BPD (<>Hadlock)				
Risk			Trisomy 18		
			<p>The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk</p>		
			Neural Tube Defect (NTD) Screening		
			<p>The corrected MoM for AFP (0.66) is located in the low risk area for neural tube defects.</p>		

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
