		<p>After the result of the Trisomy 21 test it is expected that among 9892 women with the same data, there is one woman with a trisomy 21 pregnancy and 9891 women without affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!</p>	
		Trisomy 18	
		The calculated risk for Trisomy 18 is < 1:10000, which indicates a low risk	
		Neural Tube Defect (NTD) Screening	
		The corrected MoM for AFP (1.91) is located in the low risk area for neural tube defects.
