DEPARTMENT OF ULTRASOUND

ULTRA SOUND WHOLE ABDOMEN

USG WHOLE ABDOMEN (MALE)

LIVER: Liver is enlarged in size (15 cm) and shows grade-I fatty infiltration. No focal intra-hepatic lesion is detected. Intra-hepatic biliary radicals are not dilated. Portal vein is normal in calibre.

GALL BLADDER: Gall bladder is not seen, post cholecystectomy status.

Pancreas & Common bile duct are obscured due to bowel gases.

SPLEEN: Spleen is normal in size and echopattern.

KIDNEYS:

Right kidney is normal in position, size and outline. Cortico-medullary differentiation is maintained. Central sinus echoes are compact. No focal lesion or calculus seen. The pelvicalyceal system is not dilated.

Left kidney is normal in position, size and outline. Cortico-medullary differentiation is maintained. Central sinus echoes are compact. No focal lesion or calculus seen. The pelvicalyceal system is not dilated.

URINARY BLADDER: Urinary bladder is partially distended. No significant intra or extraluminal mass is seen.

PROSTATE: Prostate is normal in size and echopattern. Its volume is ~22 cc.

Visualized parts of retro-peritoneum do not reveal any lymphadenopathy.

Probe tenderness seen in right lower quadrant with minimal fluid in peritoneal cavity.

IMPRESSION:

- Mild hepatomegaly with grade -I fatty liver.
- Probe tenderness in right lower quadrant with minimal fluid in peritoneal cavity. Suboptimal visualization due to fatty habitus.

Adv. CECT abdomen to rule out acute appendicitis & clinical correlation.
