28523.4 n	nIU/ml	0.71	Trisomy 18 Ris	sk	<1:10000	
Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)  The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off which indicates a low risk.  After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.  The patient combined risk presumes that NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523; 1998). Please note that the risk calculations are statistical aapproaches and have no diagnostic value!
