Ultrasound Data			Down's Syndrome Risk (Trisomy 21 Screening)	
Gestational age	12+6		The calculated risk for Trisomy 21 (with NT) is below the cut off which indicates a low risk.	
Method	CRL measurements		After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.	
Risk			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!	
			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523 (1998)).	
			Trisomy 18	
			The calculated risk for Trisomy 18 (with NT) is <1:10000, which indicates a low risk	
			Neural Tube Defect (NTD) Screening	
			The corrected MoM for AFP (1.44) is located in the low risk area for neural tube defects.	

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
