After the result of the Trisomy 21 test (with NT) it is expected that among 5904 women with the same data, there is one woman with a trisomy 21 pregnancy 5903 women with not affected pregnancies.  The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value!  The patient combined risk presumes that NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523; 1998).
