Risk	Down's Syndrome Risk (Trisomy 21 Screening)
	After the result of the Trisomy 21 test it is expected that among 9020 women with the same data, there is one woman with a trisomy 21 pregnancy and 9019 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!
	<b>Trisomy 18</b>
	The calculated risk for Trisomy 18 is <1:10000, which indicates a low risk
	<b>Neural Tube Defect (NTD) Screening</b>
	The corrected MoM for AFP (1.83) is located in the low risk area for neural tube defects.

The laboratory can not be held responsible for their impact on the risk assessment! Calculated value has no diagnostic value!
