

Date of Report 23-09-2024
PRISCA 5.2.0.13

Patient Data				
Name	MRS. MEENAKSHI F1		Patient ID	12409210299
Birthday	01-11-1996		Sample ID	11860328
Age at Sample date	27.9		Sample Date	21-09-2024
Gestational age	12+4			
Correction factors				
Fetuses	2	IVF	unknown	Previous trisomy 21 unknown
Weight in kg	65	Diabetes	NO	Pregnancies unknown
Smoker	NO	Origin	Asian	
Biochemical Data			Ultrasound Data	
Parameter	Value	Corr Mom	Gestational age	12+3
PAPP-A	5.9 mIU/ml	0.63	Method	CRL (<>Robinson)
fb-hCG	74.8 ng/ml	0.96	Scan date	21-09-2024
Risks at sampling date			Crown rump length in mm	61.4
Age Risk	1:804		Nuchal translucency MoM	0.82
Biochemical T21 risk	1:1880		Nasal bone	PRESENT
Combined trisomy 21 risk	<1:10000		Sonographer	DR. DEEPIKA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
Risk			Down's Syndrome Risk (Trisomy 21 Screening)	
 <p>The graph shows a risk curve for Trisomy 13/18+NT. The y-axis represents risk ratios from 1:10 to 1:10000. The x-axis represents gestational weeks from 13 to 49. A red area above the curve indicates high risk, a yellow area indicates intermediate risk, and a green area below indicates low risk. A vertical line at approximately 12 weeks shows the patient's result, which is in the green (low risk) zone. A diagonal line labeled 'Cut off' separates the high and intermediate risk zones.</p>			<p>The calculated risk for Trisomy 21 (with NT) is below the cut off, which represents a low risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes that NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523; 1998).</p>	
Trisomy 13/18+NT			The laboratory cannot be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic values	
The calculated risk for Trisomy 13/18 (with NT) is <1:10000 , which indicates a low risk				

Risk Above Cut Off

Risk above Age Risk

Risk below Age risk
