Patient ID 12411260151
7 Sample ID 11966702
2 Sample Date 26-11-2024
2
unknown Previous trisomy 21 unknown
NO Pregnancies unknown
Asian
Ultrasound Data
Gestational age 12+2
Method CRL (<>Robinson)
Scan date 26-11-2024
Crown rump length in mm 58
Nuchal translucency MoM 0.86
Nasal bone PRESENT
Sonographer DR. AMENDA
Qualifications in measuring NT MD
Down's Syndrome Risk (Trisomy 21 Screening)
The calculated risk for Trisomy 21(with NT) is below the cut off, which represents a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.
The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value! The patient combined risk presumes that NT measurement was done according to accepted guidelines (Prenat Diagn 18:511-523; 1998). The laboratory cannot be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic values
