Age Risk

1:850 Biochemical T21 risk <1:10000

1:600 Overall population risk Trisomy 13/18 <1:10000

After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.

The calculated risk for Trisomy 21 is below the cut off,

Down's Syndrome Risk (Trisomy 21 Screening)

which represents a low risk.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that the risk calculations are statistical aapproaches and have no diagnostic value!
